

PYTHON WEB SCRAPING

By Sabbir Mohammed

A brief look at NYC Real Estate

About the project:

- Using scrapy on www.trulia.com
- Site offers information on 13K+ listings for recent sales over the last nine months (May 2018 - Jan 2019)
- What variables about the property factor into the final sale price and to what extent?
- Original plan to scrape site for the following variables/ features per listing:
 - Property Type
 - Property Age
 - Sale Price
 - Sale Date
 - Area (in sqft.)
 - Street Address
 - City
 - Postal Code
 - Borough

The Five Boroughs: Number of Sales

NYC Population per Borough (US Census Bureau, 2010):

Population (2010)	
Borough	
Brooklyn	2,504,706
Queens	2,230,545
Manhattan	1,586,184
Bronx	1,384,794
Staten Island	468,730

The Five Boroughs: Average Sale Price

The Five Boroughs: Average Property Size (in sq.ft.)

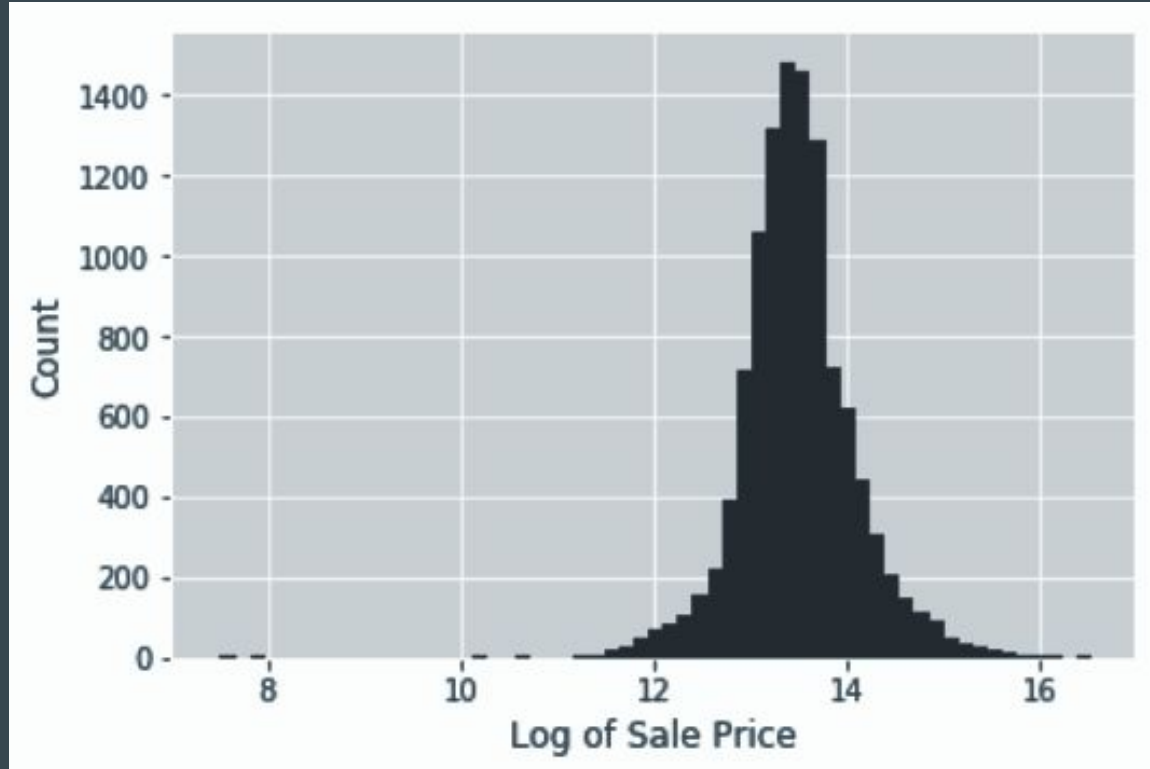

The Five Boroughs: Average Price per sq.ft.

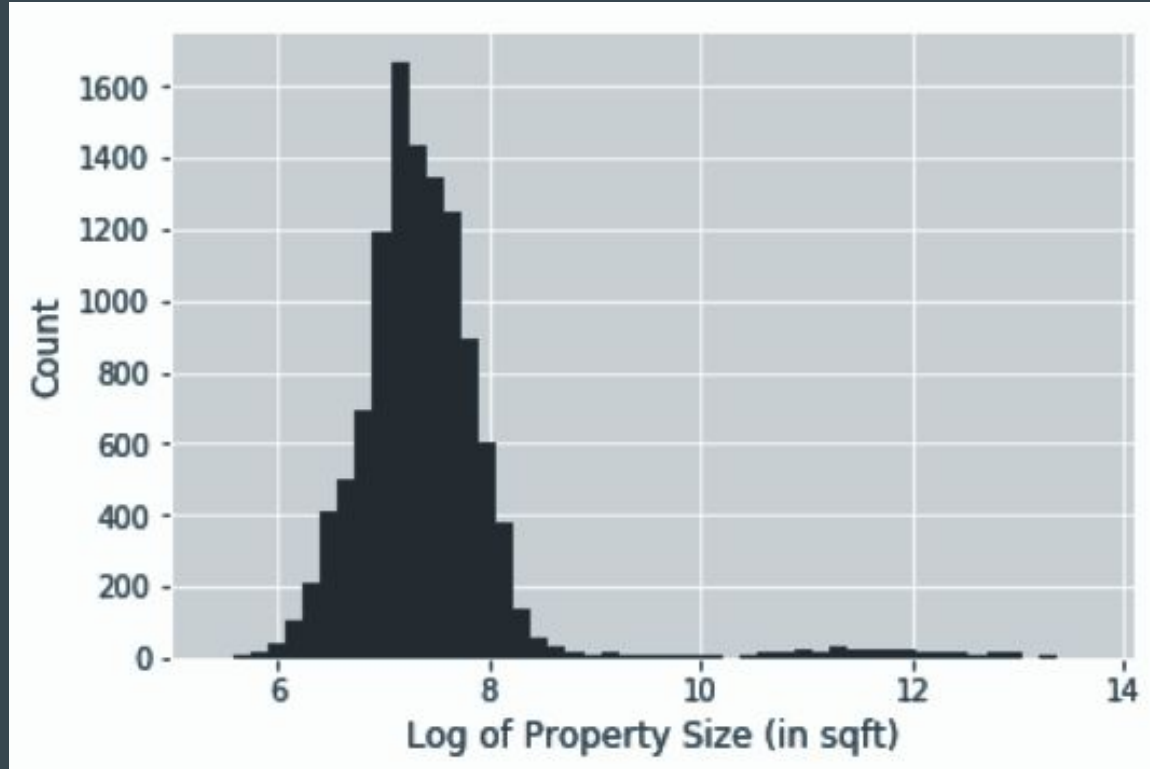

Property Size

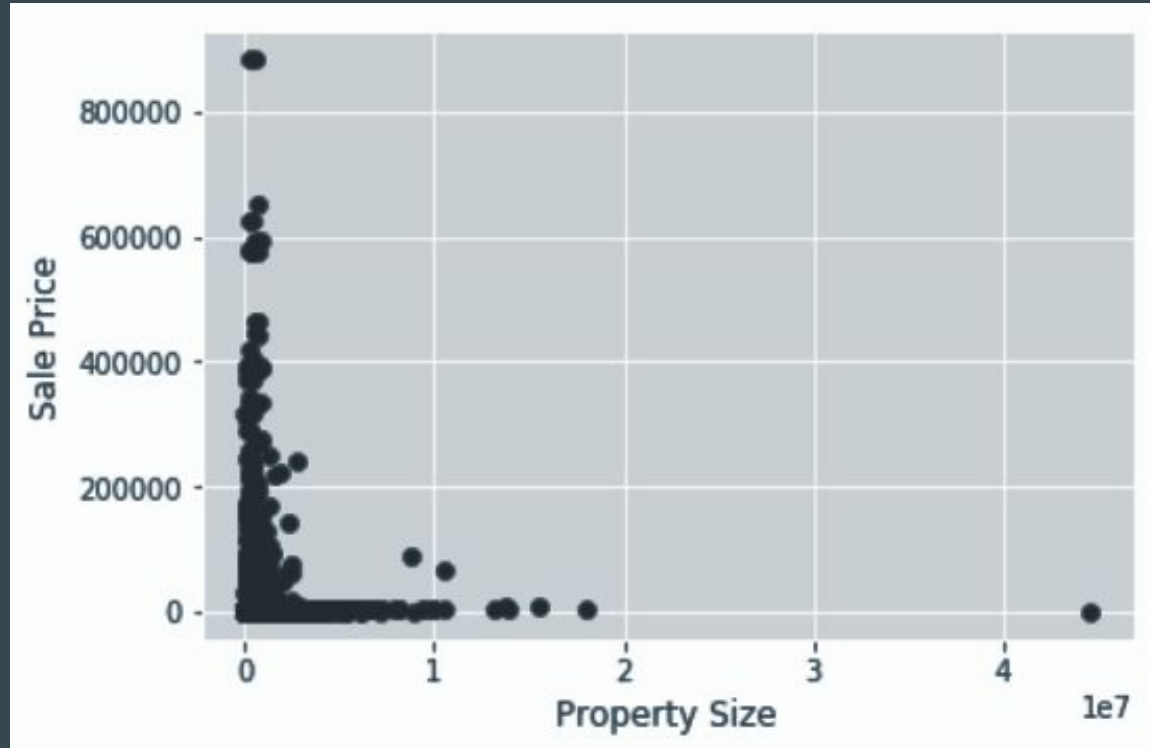

How are the listings spread? : Sale Price

How are the listings spread? : Property Size

Mapping Sale Price vs. Property Size

Mapping Sale Price vs. Property Size

(ignoring values outside 3 standard deviations)

Pearson
Correlation:
-0.045

Conclusion (partial) :

- Property location impacts price significantly more than property size does.
- Considerable disparity between boroughs in terms of price
- Age of the Property and Property Type (condo, single or multi family house) would be interesting variables to analyze for further insight.
